

Putting care delivery in the palm of your hand

Solution saves healthcare practitioners valuable time

Customer

A decade before the Golden Gate Bridge opened, Easterseals Northern California (ESNorCal) was supporting people with disabilities and their families. Today, this well-respected not-for-profit organization and its 300 practitioners are at the forefront of care for people with autism.

Challenge

For the practitioners at ESNorCal, the most difficult and cumbersome part of their job was manually recording and collecting client data. Not only was that process error prone, but it was also time consuming, adding more than hour to each of their sessions. What ESNorCal needed was an easy-to-use automated solution that recorded, tracked, analyzed, and protected sensitive client data.

Solution

Xolv's clinical practices solution was the ideal software program for ESNorCal. Designed specifically for home and community-based organizations, this mobile solution put key clinical tools and information directly at their practitioners' fingertips. In addition to ensuring data accuracy and increasing efficiency, it provided important electronic visit verification for families.

Results

Since using this solution, ESNorCal's practitioners have reduced the amount of time spent on administrative tasks by 50%. And with all of the information they need on a tablet, they no longer need to carry around a clipboard, spreadsheets and other bulky tools. Plus, this sophisticated tool provides access to real-time data allowing families to quickly and easily see progress reports of their loved ones.

With Xolv's clinical practices solution, I saw an immediate and dramatic impact on what we do. We now spend less time on cumbersome manual processes and more time providing care."
