

# Comprehensive cyber-security solution provides peace of mind

Xolv helps protect sensitive customer and company data

## Customer

For over 70 years, Easterseals Hawaii has served special needs children, youth and adults across the state. Annually, this non-profit organization provides more than 500,000 hours of direct service with the help of 400 employees.

## Challenges

Like other home and community-based organizations, Easterseals Hawaii had a hard time keeping pace with rapidly-evolving networking needs and IT governance standards. On top of that, the geographic isolation of the islands made sharing resources and securing a reliable infrastructure challenging. What it needed was a solution that was auditable, flexible and compliant with HIPAA standards.

## Solution

Easterseals Hawaii hired Xolv to provide a comprehensive security assessment and technical plan. Based on that information, Xolv's team of experts developed new networks, virtualized the server, stabilized the organization's Wi-Fi, and increased its internet capacity.

## Results

Easterseals Hawaii now has a state-of-the-art security and network system that supports its in-office and mobile workforce. The new upgrades have increased uptime in network resources by 30%, tripled the network's security assessment score, and prevented viruses and other threats. As a result, the team spends less time worrying about the security of its business and more time providing clinical care.

Our new cloud-based security and network system has taken our organization to the next level. It provides the protection that we need and it helps us operate more efficiently."
