

One system delivers big results

Enterprise Application Suite improves organizational performance and efficiency

Customers

Before 2012, Easterseals Northern California (ESNorCal) operated as a small not-for-profit organization providing services to people with disabilities and their families. After the passage of Senate Bill 946, also known as California's Autism Insurance Law, the organization's trajectory changed forever. ESNorCal formed the Behavioral Health Provider Network (BHPN) to help set the industry standard for providing behavioral health services to clients with autism spectrum disorder and their families.

Challenges

With the influx of new clients and personnel, ESNorCal and the BHPN needed a single solution that linked together their disparate HR, payroll, timekeeping, clinical and other backend applications. Plus, the organizations needed the support of a dedicated team that could manage software upgrades and deployments.

Solution

The Enterprise Application Suite powered by Xolv provided the customizable, flexible solution that ESNorCal and the BHPN required. Integrating their different applications into one seamless system allowed them to access data in real time, improved the flow of information across the organization, and ensured compliance with ever-changing healthcare regulations.

Results

With the help of Xolv's cloud-based solution, ESNorCal and the BHPN improved their data accuracy and consistency, and reduced onboarding time by 70%. Most significantly, the organizations saved up to three hours in practitioner verification per month, giving them more time to help clients live, learn, work and play to their full potential.

By integrating our backend systems, we have transformed our employees' experience. They now spend less time on administrative tasks and more time delivering clinical care to clients."
